Abstract

The University of the Philippines Industrial Engineering and Operations Research Department conceptualized the Industry Linkage Program as an enhancement to the current curriculum. Its objective is to strengthen the BS Industrial Engineering (BSIE) Curriculum with special topics aligned with industry needs and trends to better prepare the junior and senior students for industry work after they graduate from the University.

The strategy is to collaborate with industry partners and practitioners who will provide knowledge and exposure to real world processes and best practices. One of the key offerings is the Supply Chain Management (SCM) Program with BayanTrade as the industry partner.

The Industry Linkage Program aims to benefit not only the BSIE students. The collaboration opens opportunities to the faculty as possible consultants of the industry partner/s for their research programs and implementation projects, among others. The industry partner benefits from the program by having a ready pool of manpower resources already trained and exposed to their systems and processes
